Profile

SQL Server expert / Data Engineer with 4+ years of hands-on experience designing, operating, and optimizing large-scale data platforms on SQL Server. Strong background in building end-to-end data pipelines, ETL workflows, and analytics-ready data models for reporting and decision-making systems.

Experienced in transforming OLTP systems into reporting and analytical layers, developing SSIS-based ETL pipelines, optimizing data access for near-real-time dashboards, and ensuring data reliability, quality, and availability across multi-terabyte environments. Proven ability to collaborate with business and technical teams to deliver scalable, observable, and high-performance data solutions.

Currently expanding expertise in Python for data engineering, BI tools (Power BI), and modern analytics engineering practices.

Data Engineering & Pipelines

- End-to-End ETL Development (SSIS, T-SQL, Python)
- Batch & Near-Real-Time Data Pipelines
- Data Transformation, Cleansing & Validation
- Incremental Loads & Change Tracking
- Data Reconciliation Across Heterogeneous Systems
- Scheduling & Automation (SQL Agent)

Data Modeling & Analytics

- OLTP → Reporting / Analytical Schema Design
- Star & Snowflake Schema (Reporting-Oriented)
- Data Mart & Lightweight Data Warehouse Design
- Query Optimization for Analytical Workloads
- KPI-Driven Data Structures for BI & Dashboards

Databases & Storage

- SQL Server (Expert)
- Large-Scale Databases (Multi-TB)
- Indexing Strategies (Covering, Filtered, Column-aware design)
- FILESTREAM & Large Object Management
- Partitioning & Data Lifecycle Management

BI & Reporting

- SQL-Based Reporting Systems
- Analytics-Optimized Views & Materialized Queries
- Power BI (Data Modeling, DAX fundamentals – developing)
- Performance Optimization for BI Dashboards
- Business-Friendly Data Exposure Layers

Data Observability & Monitoring

- Data Pipeline Monitoring & Failure Detection
- Grafana & Zabbix Dashboards
- Prometheus Exporters (SQL Server / Windows)
- Alerting for Data Freshness, Job Failures & Capacity
- Redgate SQL Monitor (Baselines & Query Diagnostics)

Programming & Tooling

- T-SQL (Advanced)
- Python for Data Engineering (Pandas, NumPy)
- SSIS
- Linux Fundamentals (LPIC-1 – in progress)

Education

Master of Computer Engineering | Iran University of Science and Technology (IUST)| Tehran, Iran **Sep 2020 – Dec 2022**

►Professional Experience

City Innovation & Development | SQL Server Database Administrator | Tehran, Iran **Site: shahrdi.com** **Feb 2022 - Present**

- **SQL Server administration**
  - Administered an estate of 50+ SQL Server OLTP/OLAP instances across multi-TB footprints, upholding SLAs.
  - Owned HA/DR: architected and operated AlwaysOn, defined RPO/RTO, and ran regular DR drills.
  - Architected an emergency backup strategy (Full/Diff/Log) with retention tiers, off-site copies, and encryption.
  - Scaled maintenance: automated index and statistics care, executed DBCC integrity checks, and orchestrated jobs.
  - Managed patching & lifecycle: planned, tested, and deployed CUs/security updates under change control with rollback.
  - Enforced security & compliance: least-privilege access and auditing
  - Drove performance & capacity: monitored wait stats/I/O/memory, tuned workloads, and planned capacity for peaks and batch windows.

- **Maintenance, Tuning & Reporting — by Project**

  Daricheh (Production Estate — ≈30 DBs, ~2 TB)

  - Reduced MDF footprint ~90% while improving response time via indexing/housekeeping.
  - Enabled FILESTREAM to manage BLOBs efficiently and shrink primary data files.
  - Implemented AlwaysOn AGs for ~30 DBs (~5 TB) in production.
  - Redesigned backup plan to cut ~1 TB storage and bring DR RTO < 15 minutes.
  - Improved report latency by removing ~30% redundant indexes.

  New SQL Server Platform / "PardakhtSazi"

  - Built a 3-node WSFC across two sites; enabled AlwaysOn AGs for 8 DBs (~600 GB).
  - Tuned the "PardakhtSazi" OLTP workload (query rewrites, indexing, memory/I/O) to improve p95 latency.
  - Stood up a reporting data warehouse; designed and developed ETL (SSIS) pipelines for scheduled loads.

  Cross-Platform Account-Opening Reporting Service

  - Designed and deployed a central reporting service aggregating account-opening data across platforms.
  - Built ETL/SSIS jobs and standardized schemas for cross-system reconciliation.
  - Optimized reporting queries (covering indexes, filtered indexes, result caching) for near-real-time dashboards.

- **Create professional monitoring dashboard with Grafana and Zabbix**

  T-SQL | Zabbix | Prometheus | Redgate SQL Monitor
  - Built production-grade dashboards in Grafana/Zabbix powered by T-SQL and Prometheus exporters.
  - Instrumented end-to-end metrics: AlwaysOn AG health, SQL Agent jobs, login/user activity, wait stats, blocking/deadlocks, CPU/memory/disk I/O, Network infrastructure and storage growth.
  - Deployed Prometheus with SQL/Windows exporters and integrated panels/alerts in Grafana.
  - Implemented Redgate SQL Monitor for baselines, query-level diagnostics, and advanced alerting.
  - Established alert policies (SMS) for AG failover, job failures, space thresholds, and performance regressions.
  - Tracked maintenance plans and failed jobs; visualized hardware/software health with clear, actionable graphs.

Tirajeh Rayaneh Tehran | Technical support | Tehran, Iran **Site:** trt-co.ir **March 2021 – Feb 2022**

- **Technical support "Shafa" windows and web application**

  T-SQL | SQL Server Performance tuning
  - Find slow query working with Profiler
  - Redesign indexes by get online reports from execution plan
  - Find bugs and problems in EXE with SQL Server profiler
  - Working with large databases in critical Hospitals like Baqiyatallah.
  - Design and appley migration plan with minimum down time.

► Certificate

- SQL Server database administrator in Farata az danesh academy

- SQL Server performance tuning in Farata az danesh academy

► Current developing

- Deep performance tuning for high-load systems
- Python scripting for data migration and transformation
- Python programming for data engineering & ML (NumPy, Pandas, Scikit-Learn, project-based practice)
- Linux LPIC-1
