

ABOLFAZL RASTGAR MOGHADAM

Data Engineer | SQL Server DBA | Database Platform Engineer

ablfzl.rstgr@gmail.com | +98 935 224 7312 | github.com/abolfazlrastgar | Tehran, Iran - Open to Relocation

Data Engineer and SQL Server DBA with 4+ years of production experience in a high-stakes financial and banking environment. Specializes in large-scale SQL Server administration, end-to-end ETL/ELT pipeline development, near-real-time CDC integration, and database observability. Proven track record maintaining AlwaysOn Availability Group infrastructure, optimizing OLTP query performance, and building multi-source data platforms for analytical and reporting workloads. Strong foundation in data modeling, performance tuning, backup/DR strategy, and monitoring. M.Sc. in Computer Engineering with applied ML research background.

CORE TECHNICAL SKILLS

Databases SQL Server (OLTP/OLAP, multi-TB, multi-instance), PostgreSQL, ClickHouse, Elasticsearch, Redis	Data Engineering Apache Kafka, Debezium CDC, Apache Spark, SSIS, ETL/ELT pipelines, incremental loads, change tracking, SQL Agent, data reconciliation
Data Modeling Star and snowflake schema, data mart design, OLTP-to-analytics transformation, covering/filtered indexes, partitioning	Performance & Reliability Query optimization, execution plan analysis, wait statistics, blocking/deadlock analysis, index tuning, AlwaysOn AGs, HA/DR, backup and restore
Monitoring & Observability Grafana, Prometheus SQL/Windows exporters, Zabbix, Redgate SQL Monitor, pipeline alerting, freshness and job failure detection	Programming & Tools T-SQL, Python (Pandas, NumPy, Scikit-Learn), SQL, Bash, JavaScript, Docker, Linux, Windows Server, Power BI, Metabase, Git

PROFESSIONAL EXPERIENCE

SQL Server DBA & Data Engineer | City Innovation & Development

Feb 2022 - Present

Financial & Banking Sector | Multi-TB SQL Server Environment | 50+ Instances

Data Platform & Pipeline Engineering

- Architected a centralized banking data platform consolidating 50+ SQL Server instances into unified analytical and reporting layers for cross-system business intelligence.
- Designed and operated near-real-time CDC pipelines using Kafka, Debezium, and Apache Spark, streaming OLTP change events into a Lakehouse environment with sub-minute end-to-end latency.
- Built self-service analytics layers using Metabase and Power BI, providing operational dashboards and KPI reporting on live financial data.
- Developed and maintained SSIS batch ETL pipelines for a reporting data warehouse, including transformations, cleansing, incremental loads, failure alerting, and cross-platform account-opening reconciliation.

Database Administration & Query Optimization

- Administered multi-TB SQL Server environments across 50+ instances: instance configuration, index maintenance, statistics updates, job scheduling, and capacity planning.
- Improved storage efficiency across multi-TB SQL Server estates by reducing MDF footprint and removing redundant data, lowering I/O overhead and storage costs.
- Improved report query latency through covering indexes, filtered indexes, and result caching strategies on multi-TB datasets.
- Designed star and snowflake schema data models and data marts optimized for BI queries and near-real-time analytical workloads.

PROFESSIONAL EXPERIENCE

High Availability, Disaster Recovery & Infrastructure

- Architected a multi-site AlwaysOn Availability Group cluster (approx. 30 databases, approx. 5 TB) across a 3-node WSFC spanning two data center sites; designed DR runbook targeting RTO < 15 minutes.
- Built a 3-node WSFC cluster for PardakhtSazi (approx. 8 databases, approx. 600 GB); tuned OLTP workloads for improved p95 latency and designed Full/Differential/Log backup schedules reducing storage consumption by approximately 1 TB.
- Implemented and maintained Full, Differential, and Transaction Log backup strategies with verified restore procedures; managed backup encryption and retention policies.

Monitoring, Observability & Alerting

- Built production-grade Grafana dashboards powered by Prometheus SQL Server and Windows exporters, covering AlwaysOn AG health, job status, blocking/deadlocks, CPU, memory, disk I/O, and storage growth trends.
- Deployed Redgate SQL Monitor for query diagnostics and wait-statistics-based performance triage; configured SMS and email alerting for AG failover events, job failures, storage thresholds, and data freshness violations.
- Established SQL Server monitoring baselines and threshold-aware alerting across the full database fleet, enabling proactive incident detection and reducing mean time to detection.

Technical Support Engineer & SQL Optimization Specialist | Tirajeh Rayaneh Tehran

Mar 2021 - Feb 2022

Healthcare IT | Hospital Information Systems

- Diagnosed and resolved query performance bottlenecks in mission-critical hospital database systems using SQL Server Profiler; index redesigns and query rewrites improved application response times.
- Identified application-level data access defects through detailed Profiler trace analysis; designed and executed zero-downtime migration plans with structured testing phases and documented rollback procedures.
- Provided SQL Server administration support including troubleshooting blocking, job failures, and database maintenance in a 24/7 healthcare production environment.

SELECTED PROJECTS

Centralized Banking Data Platform - Real-Time Integration Layer

SQL Server | Kafka | Debezium | Apache Spark | SSIS | 2022 - Present

- End-to-end data platform ingesting operational changes from 50+ SQL Server instances via Debezium CDC streaming and SSIS batch ETL; supports multi-TB financial data across analytical and reporting consumers with full observability coverage.

Cross-Platform Account-Opening Reconciliation Service

SQL Server | SSIS | T-SQL | 2022 - 2023

- Centralized reporting service aggregating account-opening data from heterogeneous banking platforms; standardized ETL schemas, automated reconciliation logic, and optimized query patterns for near-real-time data delivery.

Database & Pipeline Observability Platform

Grafana | Prometheus | Zabbix | T-SQL | Redgate SQL Monitor | 2022 - Present

- Production observability stack covering SQL Server fleet health, AG replication status, pipeline data freshness, job failure detection, and infrastructure metrics; Prometheus exporters feed Grafana dashboards with baseline-aware alerting rules.

AI-Based Intrusion Detection System - Smart Grid Research

Python | Scikit-Learn | Random Forest | NSL-KDD | CICIDS2018 | 2022 - 2023

- Graduate research project: full ML pipeline for network intrusion detection in smart-grid environments, including k-fold cross-validation and multi-class classification. Published as M.Sc. thesis, IUST.

EDUCATION

M.Sc., Computer Engineering

Sep 2020 - Dec 2022

Iran University of Science and Technology (IUST) | Tehran, Iran

Thesis: AI-Based Intrusion Detection in Smart Grid Environments using Random Forest, Python, Scikit-Learn (NSL-KDD, CICIDS2018)

B.Sc., Computer Engineering

Graduated approx. 2017

Sadjad University | Mashhad, Iran

Thesis: Shortest Path Search Using Ant Colony Optimization (MATLAB)

CERTIFICATIONS & ADDITIONAL INFORMATION

Certifications: SQL Server Database Administration (Farata az Danesh Academy); SQL Server Performance Tuning (Farata az Danesh Academy); Linux LPIC-1 (In Progress)

In Progress: Apache Kafka, Apache Spark, PostgreSQL, ClickHouse - self-directed training

Languages: Persian/Farsi (Native); English - IELTS Academic approx. 6.5 Overall (Speaking 6.5)

Work Authorization: Open to relocation to Canada, Europe, or the US; willing to pursue work authorization.
